SUMMARY

Final year Computer Science Engineering student who ships full-stack products end to end — REST APIs on Node.js and Express, React and Next.js frontends, and relational and vector data layers. Winner of Smart India Hackathon 2025, with deployed projects spanning RAG pipelines, real-time collaboration, and agentic AI workflows. Seeking software engineering internship or entry-level full-stack roles.

ACHIEVEMENTS

Smart India Hackathon 2025 Winner National Level
Won India’s largest national hackathon for **Navjivan**, an AI-powered smoking cessation platform, judged on technical execution, scalable architecture, and real-world impact.

PROJECTS

Navjivan — AI Smoking Cessation & Wellness Platform [GitHub](#) | SIH 2025 Winner
Shipped a cross-platform mobile health app (React Native, Expo, TypeScript) on a Node.js and Express REST API for smoking cessation and fitness coaching. Engineered a memory-augmented goal engine that stores user history as 768-dimensional Gemini embeddings in Pinecone and retrieves past success patterns to generate personalized daily goals. Routed an agentic AI coach through OpenRouter for chat, meal suggestions, and sport-specific training plans, securing sessions with JWT and bcryptjs-hashed credentials.

Slate — Real-Time Collaborative Workspace SaaS [Live](#) | [GitHub](#)
Built a Notion-style collaborative workspace where multiple users co-edit documents with cursors and edits syncing live over WebSockets. Modeled nested workspaces and documents on Convex with real-time subscriptions, and implemented a custom rich text editor, Clerk authentication, and subscription tiers with a self-serve billing portal in Next.js.

ExecOS — Autonomous AI Executive Assistant [Live](#) | [GitHub](#)
Built an autonomous assistant that reads unread email on a schedule, infers intent with an LLM, and acts on the user’s behalf — drafting replies, extracting action items into tasks, and creating calendar events. Orchestrated the tool-calling loop with the Vercel AI SDK on Groq and Google APIs, persisting tasks and events through Drizzle ORM on Neon Postgres.

Kortex — AI-Powered Document Chat Platform [Live](#) | [GitHub](#)
Built a Retrieval-Augmented Generation (RAG) application for natural language querying over uploaded PDFs, indexing document embeddings in Pinecone and grounding Google Gemini responses in retrieved context through LangChain. Backed uploads with Supabase storage and Clerk authentication behind a responsive Next.js and Tailwind CSS interface.

WORK EXPERIENCE

Developer & Product Manager Intern — SPACENOS July 2026 – Present
Build and ship product features while defining requirements, prioritizing the roadmap, and translating user needs into scoped engineering tasks. Drive sprint planning and delivery tracking with cross-functional teams so releases meet product goals and timelines.

Web Developer & Video Editor — Google Developer Groups (GDG) Noida 2025 – Present
Maintain and extend the community website, shipping features, UI updates, and bug fixes for members and event attendees. Produce promotional and recap videos for meetups and coordinate event logistics with organizers.

SKILLS

Languages	JavaScript (ES6+), TypeScript, Java, SQL
Backend	Node.js, Express.js, REST APIs, JWT Authentication
Frontend	React.js, Next.js, React Native, Tailwind CSS, HTML, CSS
Databases	PostgreSQL, MongoDB, Prisma, Drizzle ORM, Convex, Pinecone (Vector DB)
AI & Integrations	LangChain, RAG Pipelines, Google Gemini, OpenRouter, Vercel AI SDK
Tools	Git, GitHub, Postman, Supabase, Clerk, Cloudinary, Expo

EDUCATION

2023 – 2027	B.Tech in Computer Science Engineering, ABES Engineering College	GPA: 7.57/10.0
2022	Class 12th, CBSE Board	88.4%
2020	Class 10th, CBSE Board	93%
